Automated, fast, accurate, sensitive data mapping & assessment as-a-service.

Leverage Data Sentinel's machine learning AI platform as a service to baseline your organization's data for compliance, risk and accuracy. Discover, classify, inventory and remediate sensitive data across multiple structured and unstructured data sources.

Use cases

Automated sensitive data mapping & classification

DPIA / PIA assessments

Data subject access requests (DSAR)

Data Quality and Accuracy

Data Risk Managment

KNOW YOUR DATA, KNOW YOUR RISK

Data Sentinel is an enterprise sensitive data management platform that leverages our machine learning technology to:

- Identify, inventory, and classify sensitive data across structured and unstructured data sources
- Prioritize data risk mitigation
- Eliminate redundant data
- Measure the financial value of data risk
- Assess data accuracy
- Inform compliance reporting with data facts
- Prove data alignment to regulations

Delivered as a service, Data Sentinel provides organisations with a scalable, efficient and cost effective way to support compliance with sensitive data regulations.
